

Acronis® Product Family

Acronis products are renowned for their quality, speed of operation, and richness of features. Whether you need to backup a server, workstation or laptop, or manage disk structures, or deploy images to PCs and servers, or protect SQL and Exchange server, there is an Acronis product to suit your needs.

Acronis Backup and Recovery simplifies and automates backup and disaster recovery processes of workstations and servers in Windows and Linux environments, across physical and virtual platforms. The product provides medium-sized to large organisations with a simple, cost-effective solution to centrally manage all backup and restore activities across the network. The product allows you to perform fast restores of operating systems and data to meet Recovery Time Objectives. With Acronis Backup & Recovery, the entire hard drive contents including the operating system, applications and data can be fully recovered in minutes, instead of hours or days. In addition, with the Acronis Backup & Recovery Universal Restore option, it is easy to restore a backup image to different hardware, including virtual machines.

Acronis Recovery for SQL Server offers a fast and reliable disaster recovery solution to protect your SQL database. Acronis Recovery for MS SQL Server provides proven database backup technology to significantly reduce disaster recovery time so organizations can be up and running again in minutes instead of hours. One-step recovery and automated recovery to point-of-failure reduces downtime in order to meet Recovery Time Objectives (RTO). The rolling snapshot feature enables near-instantaneous recovery in cases where a database is damaged due to human error or logical data corruption. Comprehensive recovery requires more than just data backup. Your MS SQL database contains tables, logs, and other components that structure the data. Using Acronis Recovery for MS SQL Server, a unified and intuitive backup solution, is critical to create a secure live database backup that can be recovered successfully.

Acronis Recovery for Exchange Server is an excellent complement to the award-winning Acronis family of disaster recovery and system migration products, using patented disk-imaging technology. Together, they deliver comprehensive server and workstation disaster recovery and full Microsoft Exchange database protection — a winning disaster recovery plan combination. When your Exchange Server goes down, every second counts. Nothing is faster or more secure than Acronis Recovery for Microsoft Exchange. With one-step automated backup, you can rest assure that all of your organisation's critical communications are preserved. When disaster strikes, Acronis Recovery for Microsoft Exchange will enable you to retrieve specific e-mails, shared folders, or entire mailboxes for specific users and to maintain e-mail services.

Acronis Snap Deploy Businesses today face increasing challenges when it comes to configuring and deploying new PCs in a distributed, corporate environment. IT staff need solutions that can quickly and efficiently deploy new systems that comply with established policies and can be managed from a central location under an environment where budgets are tight but service level improvements are expected. Having a deployment solution in place that enables businesses to create a number of standardized configurations can save costs. Acronis Snap Deploy is a comprehensive deployment solution that enables organizations to deploy new PCs and servers quickly and easily. Using disk-imaging technology that creates an image of an entire hard disk drive, including the operating system and all applications, it is ideal for rapid bare-metal installations of PCs and servers.

Acronis Disk Director Server is a powerful suite of partition and hard disk management utilities to ensure your servers are running efficiently. The product builds upon the award-winning technologies from Acronis to manage partitions and reformat hard disk drives. The product is an ideal companion to Acronis Backup & Recovery. Use Acronis Disk Director Server to manage volumes and maximise server performance. Then use Acronis Backup and Recovery to backup an entire server, enabling recovery in minutes without any reinstallation whatsoever.
